Sequence 5, Application US/09144085

Sequence 5, Application US/09144085

Patent No. 6280999

GENERAL INFORMATION:

APPLICANT: Betlach, Mary C.

APPLICANT: Betlach, Mary C.

APPLICANT: Ziermann, Rainer

TITLE OF INVENTION: SORARGIUM POLYKETIDE SYNTHASES AND ENCODING DNA

TITLE OF INVENTION: THEREFOR

FILE REFERENCE: 30062-20020.20

CURRENT APPLICATION NUMBER: US/09/144,085

CURRENT FILING DATE: 1998-08-31

CURRENT FILING DATE: 1998-01-22

NUMBER OF SEQ ID NOS: 8

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 5

LENGTH: 423

TYPE: DNA

ORGANISM: Artificial Sequence

FEATURE: INFORMATION: Description of Artificial Sequence: DNA fragment

OTHER INFORMATION: corresponding to a KS domain of Sorangium

OTHER INFORMATION: cellosporum SMP44 gene

/Notes weeter; pTTT3D-Pac (Pharmacia) with a modified
polylinker; Site_1: Not I; Site_2: Eco RI; The UI-R-C3
library is a subtracted library of a series, ultimately
derived from a mixture of individually tagged normalized
libraries from rat placenta, adult lung, brain, liver,
kidney, heart, spleen, ovary, muscle, and 8, 12 and 18-day
embryos, after a series of subtractions to reduce the
representation of cDNAs from which ESTs had already been
generated. The following serially subtracted libraries
were generated in this process: UI-R-C3, UI-R-C2p, UI-R-C3,
/UI-R-C0, UI-R-A1, UI-R-E1. The tag is a string of 3-5
nucleotides present between the Not I site and the
oligo-dT track whichallows identification of the library
of origin of a clone within themixture. The subtracted
library (UI-R-C3) was constructed as follows: PCRamplified
cDNA inserts from (UI-R-C2p clones from which 3; ESTs had
been derived was used as a driver in a hybridization with
the UI-R-C3p library in the form of single-stranded
circles. The remaining single-stranded circles (subtracted
library) was purified by hydroxyapatite column
chromatography, converted to double-stranded circles and
electroporated into DHJOB bacteria (LifeTechnologies) to
generate the UI-R-C3 library. This procedure has been
previously described (Bonaldo, Lennon and Soares, Genome
Research 6:791-806, 196)*

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY The library is named RPGI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the Ibrary and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be contain/Qualifiers

BACR14B09 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence.
AL066742
```

collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp. the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila\_bac.htm. Web: www.genoscope.cns.fr)
 Determination of this BAC-end sequence was carried out as part of a Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr Eukaryota; Metazoa; Arthropoda; Tracheata; Hexapoda; Insecta; Pterygota; Neoptera; Endopterygota; Diptera; Brachycera; Muscomorpha; Ephydroidea; Drosophilidae; Drosophila.

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain 92; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org.the BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a hCAAP, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a protein encoded by a nucleic acid (NA) Group I molecula: The disorders are small and non-small cell lung cancer, melanoma, colon, breast, head and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a small cell lung cancer associated gene designated as NY-SCLC-3 encoding human ZIC2 protein.

The invention relates to novel isolated lung small cell cancer antigen copyrucleotides (I) and polypeptides (II) used in a method of detecting cancer in a patient. The method is optionally performed by cutilising oligonucleotides (III), where the biological sample from the patient is contacted with (III), detecting the amount of polynucleotide hybridised to (III) in the sample and comparing the amount of polynucleotide to a predetermined cut-off value and thereby determining cancer in a patient. (I), (II) or antigen-presenting cells expressing (II) is useful for stimulating and/or expanding T cells specific for a tumour protein. The method comprises contacting T cells specific for a tumour protein. The method comprises contacting the and/or expansion of the components under conditions to permit the stimulation and/or expansion of the cells. A composition comprising (I) is useful for stimulating and/or expansion of the cells. A composition comprising (I) is useful for stimulating and for inhibiting the development of cancer in a patient. An absoluted T cell population is useful for removing tumour cells from the biological sample and for inhibiting the development of cancer in a patient. AASS1460-AASS1874 represent novel human lung small cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        05-SEP-2000;

The method is useful for screening new drugs for treating a nervous system disorder, or for isolating a novel nerve growth factor. The transdifferentiated cell is useful in both cell and gene therapies aimed at alleviating various neurological disorders. The cell or gene therapy approach involves the use of autologous transplantation or grafting of the newly created neuronal cells as treatment for brain or spinal cord injury, stroke and neurodegenerative diseases (e.g. Parkinson's disease, Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1002

The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition improving drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914 represent PCR primers for a mouse ischaemic condition related sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI9922 to ABI99912, encoding
prostate cancer;

CC directed against at least 2 mRNAs selected from target genes, coding and conor-coding regions of RNAs corresponding to target genes, coding and composite the coding regions of RNAs corresponding to target genes, gene coding regions, the 3'-end and the juxta-section between coding and non-coding cregions and all segments of RNAs encoding proteins associated with one coding composite the diseases, conditions or mixtures. The antisense oligonucleotides coding end proteins associated with one coding proteins associated with one coding proteins associated with one coding conditions or mixtures. The antisense oligonucleotides coding lung diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and conditions are those associated with impaired respiration, impeded conditions are those associated with impaired respiration, impeded condition, respiratory distress syndromery vasoconstriction, continuous conditions and concers syndrome, pain, cystic fibrosis, complayment, propertension, pulmonary vasoconstriction, emphysema, chronic constructive pulmonary disease (COPD), and cancers such as leukemias, concerning cancer, breast cancer, helanoma, cancinoma, cancinoma, kidney cancer, melanoma, concerning concerning cancer, melanoma, concerning concerning cancer, melanoma, concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning con

CC directed against at least 2 mRNAs selected from target genes, coding and con-coding regions of RNAs corresponding to target genes, gene coding and concoding regions, intron-exon borders, the cc initiation codons, genomic flanking regions, intron-exon borders, the cc frequency of the juxta-section between coding and non-coding cc regions and all segments of RNAs encoding proteins associated with one cc or more diseases, conditions or mixtures. The antisense oligonucleotides (CC may be derived from sequences AAX55272-74. These multiple target coligonucleotides (specifically AAX55272-74. These multiple target coligonucleotides (specifically AAX55280-271) can be used for the cc antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and cc inflammation, including lung diseases, pulmonary vasoconstriction, cf inflammation, including lung diseases, pulmonary vasoconstriction, conditions, respiratory distress syndrome, pain, cystic fibrosis, cc inflammation, respiratory distress syndrome, pain, cystic fibrosis, colomary hypertension, pulmonary vasoconstriction, emphysema, chronic constructive pulmonary disease (COPD), and cancer, buncaer, buncaer, melanoma, melanoma, carcinomas, e.g. colon cancer, breast cancer, melanoma, melanoma, construction metastasise and types of cancers which may metastasize for the discussive constraints and recertain cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      impaired respiration; inflammation; lung disease; pulmonary vasoconstriction; inflammation; allergic rhinitis; acute asthma; allergy; asthma; impeded respiration; respiration; pulmonary distress syndrome; paln; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; colon cancer; breast cancer; lung cancer; pancreatic cancer; hepaticeric metastasis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: ball, ball family of g-box binding factors, basic helix-loop-helix zipper, LIM domain, AP2 and ERBBs, zinc finger domains of type 2 Cys2His2, CCAAT box elements
                                                                                                                                               Eucalyptus grandis.
                                                                                                                                                                                                  Plant; transcription factor; gene expression; eucalyptus; pine; acaci poplar; sweetgum; teak; mahogany; bZIP; G-box binding factor; basic helix-loop-helix zipper; homeotic; homeodomain; homeobox; MADS; homeodomain; zipper; LIM domain; AP2; EREBs; zinc finger domain;
                                                                                                                                                                                                                                                                                                                                                                                                            AAC56714 standard; DNA; 438 BP.

The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, LIM domain, AP2 and EREBs, zinc finger domains of type 2 Cys2His2, CCAAT box elements

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and it; infectious diseases such as viral, bacterial, fungal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antiagonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated polypeptide for treating, preventing and/or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 9968 BP; 2324 A; 2302 C; 2695 G; 2647 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 2; SEQ ID NO 2718; 781pp + Sequence Listing; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the cloning and sequencing of the cluster encoding a modular type I polyketide synthase (PKS) enzyme involved in the biosynthesis of the macrolide antibiotic nystatin. The nystatin PKS is useful as antifungal antibiotics. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 65140 BP; 8270 A; 25171 C; 22273 G; 9426 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequence is a Streptomyces noursei nys1 DNA of nystatin PKS gene cluster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 2; Page 116-151; 266pp; English.

The nystatin PKS is useful as antifungal antibiotics. The present sequence is a Streptomyces noursel nystatin PKS gene cluster DNA.

HSV-2 ICP4 protein is recognized by cytocoxic T-lymphocyte (CTL) cells in humans and is used in vaccines for therapeutically or prophylactically treating HSV infections. Pharmaceutical compositions of HSV-2 ICP4 protein may be used to treat patients suffering from HSV infections, to prevent or decrease recurrent herpes disease, frequency,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2547
